

Marketing Analysis – Competitive Analysis - Overview

Competitor analysis is an ongoing process of researching, reviewing, and evaluating our competitors in the market. As analysts, we continuously study our competitors' behaviors from multiple perspectives and assess the data gathered to comprehend their business objectives.

Through competitor analysis, we can achieve the following objectives:

1. **Create and Maintain Competitive Advantage:** By understanding our competitors' strategies and market positioning, we can identify areas where we can differentiate ourselves and maintain a competitive edge.
2. **Strategize Business Plans:** Competitor analysis enables us to develop informed business strategies and tactics to outperform our competitors and seize market opportunities.
3. **Understand Market Problems and Design Solutions:** By studying competitors' weaknesses and challenges, we can identify market gaps and develop innovative solutions to address customer needs effectively.
4. **Identify Market Gaps and Launch Products:** Through competitor analysis, we can uncover underserved segments or unmet needs in the market, allowing us to introduce products or services that fulfill those demands, thereby gaining a competitive advantage.

Furthermore, market analysis is not a one-time research. When the market changes, the businesses are changing too. So continuous research and targeted research are very important to stay ahead of the market changes and make informed decisions.

In essence, competitor analysis empowers us to adapt to market dynamics, capitalize on opportunities, and stay ahead of the competition in today's dynamic business environment.

What To Consider –

As part of business planning, competitive analysis ensures the business survives and thrives competitively by understanding how competitors provide products and customer experience and how we provide products and customer experience from our end.

To do a proper competitor's analysis we need to consider the following aspects.

1. Consider a research strategy – The research strategy must outline the objectives, methodology, and resources required to gather relevant information about competitors.
2. Create a competitor analysis plan - Create a structured competitor analysis plan that defines the scope of the analysis, identifies key competitors, and outlines the criteria for evaluating their strengths, weaknesses, opportunities, and threats (SWOT analysis).

3. What tools are going to use? - Determine the tools and resources needed to conduct the analysis effectively. This may include industry reports, market research data, social media monitoring tools, and competitive intelligence platforms.

For example, tools like LinkedIn Sales Navigator can provide valuable insights into competitors' sales strategies and customer interactions.

4. Start the competitive analysis on set – Plan and start the competitive analysis at the beginning of the business or brand. So we can understand our competitors as part of our business plan.
5. Find the right person or team – The right person or team is very important to conduct the competitive analysis. They must capture the data, analyze the information, and make assessments to guide sales and marketing.

How to do a competitive analysis

The competitive analysis strategy can be different from company to company or project to project. But there are some primary steps we must follow as analysts.

1. Profile our top competitor in the market.

Profiling our competitors is one of the important steps. Through this, we can understand our biggest competitors and how they behave in the market. There are mainly three types of competitors.

- I. Head-to-Head Competitor (Direct Competitors)- They sell a similar product to ours and target the same market as ours.
- II. First Tier Competitor (Indirect Competitors)– They sell similar products but don't have all the products like ours.
- III. Second Tire Competitor (Potential Competitors)- They are competitors who sell subsidiary products.

By identifying and profiling these types of competitors, we gain valuable insights on our competitors and market landscape to gain a competitive edge.

2. Narrow the playing field.

Identify the companies that fit to be the top 3 three competitors by looking at their industry, market, and their strategic approach. There are mainly three types of competitors.

1. Industry competitors – (The industries made with companies that sell similar products/services.)
 - Look for companies operating in the same industry or sector as ours.
 - Identify competitors that offer similar products or services to ours.

- Consider factors such as market share, reputation, and product/service offerings.
- Evaluate their strengths, weaknesses, opportunities, and threats (SWOT analysis) compared to ours.

2. Market competitors – (Companies in locations that could cut into your market share.)

- Identify companies that operate in the same geographic locations or target similar customer segments as ours.
- Analyze their market share, distribution channels, and customer base within these locations.
- Assess how their presence in these markets could potentially impact our market share and competitive position.

3. Strategic group –

- Identify companies with a similar business model or strategic approach to ours. They are not identical to your company, but their strategy can attract our customers.
- Look for competitors that target the same customer needs or pursue similar market opportunities.
- Assess their strategies, marketing tactics, and customer engagement approaches.
- Consider how their strategic decisions and initiatives could influence our customers' preferences and behaviors.

By considering these factors and conducting thorough research and analysis, we can identify the top three competitors that pose the greatest threat or competition to our business.

3. Build the competitor profiles.

Building competitor profiles is essential for gaining deeper insights into their strengths, weaknesses, and strategies. Here are some key elements to include in competitor profiles:

I. Financial Review Reports:

Analyze competitors' financial statements, including revenue, profit margins, and growth trends. Assess their financial stability, liquidity, and investment priorities.

II. Pricing Information: Gather data on competitors' pricing strategies, including pricing tiers, discounts, and promotions. Compare their pricing with ours to identify competitive advantages or areas for improvement.

III. Sales Volume: Obtain information on competitors' sales volume and market performance. Analyze sales trends over time and identify patterns or fluctuations.

IV. Market Share: Estimate competitors' market share within specific markets or segments. Compare their market share with ours to understand relative positioning and competitive intensity.

- V. **Market Strategy:** Evaluate competitors' overall market strategy, including product positioning, distribution channels, and marketing tactics. Identify key strengths and weaknesses in their approach and potential areas of differentiation.
- VI. **Customer Satisfaction Scores:** Gather data on customer satisfaction scores or ratings for competitors. Analyze customer feedback and reviews to understand competitors' strengths and weaknesses in customer service and experience.

By compiling and analyzing these key elements, we can develop comprehensive competitor profiles that provide valuable insights for strategic decision-making and competitive profiling.

4. Determine competitor strengths and weaknesses.

After profiling the competitors, we must determine what are their strengths and weaknesses. When determining competitor strengths and weaknesses, it's essential to consider various factors that provide insights into their competitive advantages and vulnerabilities. Here's how we can evaluate competitor strengths using different methods:

- I. **Product evaluation-** When we are evaluating customer products we look into the,
 - Range of products offered by competitors.
 - Market Presence: Determine how long their products have been in the market and their market penetration.
 - Attributes: Identify the positive attributes of their products, such as quality, features, and innovation.
 - Reviews: Analyze both positive and negative reviews of competitor products to understand customer perceptions and areas for improvement.
- II. **Product promotions.**
 - Investigate competitors' product promotions across various channels, including marketing, public relations, advertising, digital marketing, and social media.
 - Assess the effectiveness of their promotional efforts in reaching and engaging target audiences and driving sales.
- III. **Financial revenue. (Analysis of competitor financial revenue.)**
 - Analyze competitor financial data, including revenue, profit margins, and growth trends, to gauge their financial health and performance.
 - Understand the factors driving their revenue growth or decline and their investment priorities and strategies.
- IV. **Customer experience.**
 - Investigate customer feedback and reviews to understand the customer's point of view and experience of the competitors' products and services.

By evaluating these factors, we can gain an understanding of competitors' strengths and weaknesses, enabling us to identify opportunities for differentiation and competitive advantage in the market.

5. Compare yourself with your competitor.

By effectively and honestly comparing our products with competitors' products we can stay competitive, identify weaknesses in our products and services, identify growth opportunities, understand our position in the market, and gain many more advantages.

For this comparison, we can use the following approaches.

- I. Collect honest opinions: Gather feedback from customers and stakeholders to gain insights into how our products compare with those of our competitors. This feedback can provide valuable perspectives on areas of strength and areas for improvement.
- II. Use external researchers: Engage outside researchers or consultants to conduct evaluations of our products and compare them with those of our competitors. Their unbiased assessments can offer valuable insights into areas such as quality, features, and customer satisfaction.
- III. Collaborate with marketing agencies: Build partnerships with marketing agencies specializing in market research and product evaluations. These agencies can provide comprehensive analyses by comparing our products with the competitors.

(When we are using external marketing agencies, we are revealing classified information on our products, and this might be a disadvantage for us. So, it's ideal to sign a "non-disclosure agreement".)
- IV. Implement a mystery shopping strategy: Use mystery shoppers or undercover buyers to evaluate the customer experience of our products compared to our competitors. By doing this we can simulate real-world interactions evaluate service quality and product presentation and measure overall customer satisfaction.
- V. Conduct Surveys: Use surveys to gather feedback from customers and stakeholders, allowing you to understand their perceptions of your products relative to those of your competitors. Surveys can provide quantitative data and qualitative insights to inform your comparative analysis.

Overall, comparing ourselves with our competitors' products is crucial for staying competitive, identifying opportunities for growth, and ensuring that your products remain relevant and compelling in the marketplace.

6. Research competitor interactions with the customers.

Researching how much customers interact with our competitor's products and how they react to them can provide valuable insights into customer preferences and market trends. Here are three methods/techniques to accomplish this:

- I. Search engine optimization – Utilizing SEO techniques allows us to understand customer search behavior related to our product categories. By analyzing keyword search data using tools like "WordStream," we can identify common search queries and topics of interest to customers. This information helps us address specific customer issues and preferences, ensuring our products meet their needs effectively.

For example: If we are in the electronic business, we can use SEO techniques or keyword search tools to collect data on what customers search in this category. What they search for will tell us about their mind.

If they are searching for a specific product issue on the Internet, that means we have to identify that particular problem and address that particular issue on our products.

- II. Social media intelligence: MI tools such as "Talkwalker" and "Brandwatch" enable us to monitor social media conversations about our competitors' products. By tracking mentions, sentiment, and engagement levels on platforms like Twitter, Facebook, and Instagram, we gain insights into customer perceptions and brand reputation. This information helps us understand how customers interact with competitor products and identify opportunities to improve our offerings.

- III. Rating sites: Use the product rating sites to know customer experience.

Product rating sites like Yelp, Consumer Reports, and Google Business Profiles allow us to access firsthand customer feedback and reviews. By analyzing ratings, reviews, and comments, we can gain insights into customer experiences, satisfaction levels, and areas for improvement.

Additionally, we can gather information on pricing, benefits, and features that drive customers to choose competitor products over ours, helping us refine our product strategy and marketing approach.

By using these methods, we can gather valuable insights into customer behavior, preferences, and perceptions regarding competitor products. This information enables us to make informed decisions, enhance our products, and stay competitive in the market.

Identify competitor strategies through analysis.

Analyzing competitor strategies is essential for understanding the competitive market and identifying areas of opportunity or threat for our own business. Here's a structured approach to analyzing competitor strategies,

1. Identifying the competitor's goals.

We are not the only ones who do the competitor analysis. Our competitors do the same. That's why we need to identify our competitor's goals and what they are trying to achieve and how will they do it.

- If we know the competitor's goals, we can design counter strategies for it.
- This counter strategy uses different tactics to stop your competitor's strategy from working as planned.

For example:

- If our competitor is trying to hire professionals with technical backgrounds and subject matter specialists, this signals our competitor is trying to improve products through innovation.
- If the competitor is trying to invest heavily in public relations and marketing this means they are trying to increase their brand awareness and credibility.

After analyzing the competitor's goals, we can counter the strategy.

- If the customer is trying to reduce the prices. We can provide short-term discount coupons to the customers.
- We can find new tech items or innovations that could enhance our current products and outsmart the competitor.
- We can also run a PR campaign and community service or other activities for brand promotion.

2. How to analyze the competitor research data.

Analyzing competitor research data requires a systematic approach to derive meaningful insights and inform strategic decision-making.

1. **Organize the Data:** Gather all the competitor research data obtained from various sources, such as market reports, websites, social media, and industry publications. Organize the data into categories such as products/services, pricing, marketing strategies, customer feedback, etc.
2. **Identify Key Metrics:** Identify the key metrics and variables that are relevant to your analysis. These could include market share, pricing trends, customer satisfaction ratings, website traffic, social media engagement, etc.
3. **Compare and Contrast:** Compare our business performance with that of your competitors across various metrics/features. Identify areas where your competitors excel or lag compared to your own business.

To do this I usually follow the following simple "Product feature comparison table/matrix."

Product Features	Priority	Competitor 1	Competitor 2	Competitor 3	Competitor 4
Product feature 1	High	Yes	Yes	No	Yes
Product feature 2	High	Yes	No	Yes	Yes

Product feature 3	Medium	No	Yes	Yes	Yes
Product feature 4	Low	No	Yes	Yes	Yes

How to: The above analysis table is very simple, after we have identified the key matrix and features, we list it down in each row of the above table. We also list the identified top 4 competitors (you can name as many as competitors) names in each column and compare who has the most key features by providing Yes or No signs. (Instead of Yes or No signs we can use 1 – 10 number scales, to get more accurate results.)

Product feature **priority** is a key column, and we are grading the product features based on what features customers are mostly considering when buying a product.

The competitor who has the most features will be the one with the significant advantage.

How to use this analysis: If we are launching a new product, we can use this table as competitor product evaluation and we can understand what features have high priority and what features need to be in our product.

And if we are an existing product owner, we can identify which areas we are lacking and what areas we need product improvements.

After analyzing these data our product needs to provide all the necessary features and some extra features, if possible, for a competitive price.

Using the above steps, we can systematically analyze the competitor's research data to derive meaningful insights that will guide our product development efforts and help us maintain a competitive edge in the market.

3. Observe competitor marketing and selling process.

After researching and analyzing the competitor's goals and product features, it's essential to delve into their marketing and selling strategies. There are primarily two observation techniques and those are,

- I. Direct Observation – In this method, the competitor analyst or market researcher physically observes and evaluates how employees engage with customers and promote products. Through firsthand observation, the researcher can assess customer interactions, sales techniques, and the overall customer experience.
- II. Indirect observation – Alternatively, the observer relies on third-party reports or data sources to gain insights into the competitor's marketing and selling processes.

Direct Observation.

In direct observation, the researcher examines how employees interact with customers, including their approach, product knowledge, and sales techniques.

By observing these interactions firsthand, the researcher can gain valuable insights into the competitor's customer engagement strategies and identify areas for improvement.

- In-store interaction: This is the most widely used direct observation technique and during this, the researcher visits competitors' stores to evaluate various aspects of customer interaction and sales techniques. This evaluation will be processed under different categories and those are,
 - Facility check: Evaluate the facility environment such as how clean the facility is, the layout design, and how many amenities and other services have been arranged in-store environment will be evaluated.
 - Customer engagement: The researcher needs to evaluate how employees approach and engage with customers including how they greet, offer their assistance, and how they initiate conversations and understand customer needs and preferences.
 - Product knowledge: During the interaction with the customer sales personnel must show above-average product knowledge including knowledge of product features, benefits, and recommendations knowledge.
 - Sales techniques: The researcher needs to evaluate the different sales techniques of sales personnel. This needs to include observing upselling and cross-selling techniques, product demonstrations, promotional offers, and other sales techniques.
 - Customer Assistance: Throughout the observation, the researcher monitors how employees provide assistance and support to customers throughout their shopping journey. This involves observing the responsiveness of employees to customer inquiries, their willingness to provide guidance and recommendations, and their ability to resolve any issues or concerns that may arise.
 - Overall Customer Experience: apart from the store environment, the researcher evaluates the overall customer experience and after-sale service.

Through direct observation of in-store interactions, the researcher can gain valuable insights into the competitor's customer engagement strategies, sales techniques, and overall customer experience. These insights can inform strategic decisions and help identify opportunities for improvement to enhance competitiveness in the market.

To make this analysis more accurate researchers are using the **scorecard technique**.

The scorecard technique: When analyzing the different in-store observations as a researcher we can use a number rating system in the following score-card template.

	Competitor 1	Competitor 2	Competitor 3	Competitor 4
Facility check	4	5	4	5
Customer engagement	3	5	4	5
Product knowledge	1	2	4	4
Sales techniques	2	5	4	5
Average Score	2.5	4.25	4	4.75

- When considering all the average scores of 4.75 competitor 4 has the significant advantage of becoming the market leader.

Indirect Observation

In-direct observation involves gathering insights on competitor's marketing and selling processes through third-party reports, data sources, or observations made by others. This approach relies on existing information and observations rather than firsthand experiences.

Here's how indirect observation can be applied:

1. **Market Research Reports:** Analyzing the market research reports published by industry analysts, consulting firms, or market research agencies. These reports often provide comprehensive analyses of market trends, competitor strategies, and consumer behavior, offering valuable insights into the competitor's marketing and selling tactics.
2. **Customer Reviews and Feedback:** Analyze customer reviews, feedback, and ratings posted on online platforms, social media channels, or review websites. By aggregating and analyzing customer experiences and opinions, you can gain insights into the competitor's product performance, customer satisfaction levels, and areas for improvement in their marketing and selling processes.
3. **Industry Publications and News:** Monitor industry publications, trade magazines, and news articles for information about the competitor's marketing initiatives, product launches, promotional campaigns, or strategic partnerships. These sources often provide valuable insights into the competitor's marketing strategies and key developments within their industry.
4. **Online Analytics Tools:** Use online analytics tools and platforms to gather data on the competitor's digital marketing efforts, website traffic, social media engagement, and online advertising campaigns. By analyzing metrics such as website traffic sources, keyword rankings, and social media interactions, you can gain insights into the effectiveness of the competitor's online marketing and selling strategies.
5. **Supplier and Distributor Insights:** Gather insights from suppliers, distributors, or industry contacts who may know the competitor's marketing and selling processes. These stakeholders may provide valuable information about the competitor's product offerings, pricing strategies, distribution channels, and promotional activities.
6. **Customer Surveys and Interviews:** Conduct surveys or interviews with customers who have interacted with the competitor's products or services. By gathering firsthand feedback and insights from customers, you can uncover valuable information about their perceptions, preferences, and experiences with the competitor's marketing and selling processes.

By using indirect observation techniques, we can gather valuable insights into the competitor's marketing and selling process analysis through existing data sources, reports, observations, and stakeholder interactions. These insights complement direct observation efforts and help paint a comprehensive picture of the competitor's strategies, and strengths, and enlighten the areas we can improve ourselves.

Evaluate the outcome of your competitive analysis.

The data we have gathered from various sources need to be critically evaluated before making a business decision that can have a significant impact. To do this every organization must create or select an evaluation framework.

Organizations can build their framework by creating data storing and analyzing methods and by planning their own way of evaluating to make decisions. But we can also use the existing evaluation framework to analyze competitors' data.

We can analyze competitors' data under several categories.

1. By identifying the strengths and weaknesses.

The best way to do this analysis is using the SWOT analysis. We can do a SWOT analysis on our products to understand our capabilities and we can do a SWOT analysis on competitors data to understand what are the strengths and weaknesses on our competitors.

SWOT Analysis on competitors.

- I. **Strengths:** Analyze data to identify areas where your competitors excel and have a competitive advantage. This could include factors such as strong brand recognition, high customer satisfaction ratings, innovative product features, efficient supply chain management, or extensive market reach.
- II. **Weaknesses:** Examine data to uncover areas where your competitors are lacking or underperforming. This includes factors such as poor customer reviews, low product quality, limited product offerings, high pricing relative to value, slow response to market trends, or outdated technology infrastructure.
- III. **Opportunities:** Use data to identify external factors in the market environment that present opportunities for your competitors. This could include trends such as growing consumer demand for specific products or services, emerging market segments, changes in regulations favoring certain industries, advancements in technology enabling new business models, or gaps in the competition that your competitors could exploit.
- IV. **Threats:** Evaluate data to pinpoint external factors that pose threats to your competitors' success. This might include factors such as intensifying competition from new market competitors or existing competitors, economic downturns affecting consumer spending, shifts in consumer preferences, disruptions to the supply chain, or negative publicity damaging the brand reputation.

To conduct a SWOT analysis on competitors' data effectively, it's essential to gather comprehensive and accurate information from various sources, including market research reports, industry publications, financial statements, customer reviews, social media mentions, and news articles. Analyzing this data can provide valuable insights into your competitors' strategic positioning, performance, and vulnerabilities, helping you identify areas where you can gain a competitive advantage and develop effective strategies to compete in the market.

SOAR Analysis,

This is also similar to the SWOT analysis, but this framework focuses more on positive factors than threats and weaknesses.

- Strengths and opportunities are similar to the SWOT analysis. But in SOAR analysis we are also focused on Aspirations and Results.

I. Aspirations: This represents the organization's vision, goals, and desired future state. This involves defining what the competitor aims to achieve and the outcomes they want. Aspirations provide direction and motivation for the organization's strategic initiatives and guide decision-making toward desired outcomes.

II. Results: Results are the outcomes or achievements that the organization/competitor aims to accomplish based on its strengths, opportunities, and aspirations. Evaluate the results or outcomes that our competitors have achieved based on their strengths, opportunities, and aspirations. This could include key metrics such as market share, revenue growth, profitability, customer satisfaction ratings, product innovation, or brand recognition.

Analyze how effectively your competitors are executing their strategies and whether they are achieving their desired results in the market.

By conducting a SOAR analysis on market competitors, you can gain valuable insights into their competitive positioning, strategic priorities, and performance in the market. These insights can inform your strategic planning efforts, helping you to identify areas where you can differentiate yourself, capitalize on available opportunities, and strengthen your competitive advantage in the market.

2. By doing a benchmark and position analysis.

Another way of analyzing the competitor's data we gathered through the benchmark and positioning analysis. We can compare our competitor's business performance, capabilities, and benchmark to identify market position. The best and ideal evaluation framework is to do this by using **Perception Mapping**.

Perception mapping is a competitor or brand analysis technique. We are comparing all the brands or market competitors against two attributes in a quadrant graph. These attributes generally include price, quality, customer service, or other measurable variables.

For example:

Conclusion: After analyzing the above graph, we can identify that “new balanced” products are in the low-quality section with a somewhat high price. “Nike” provides top-of-the-quality products for the highest price rate in the market. However, the “Puma” brand provides high-quality products for a reasonable price range.

- Through this analysis, we can use any measurable attributes to compare on the graph. The goal of perception mapping is to visually represent the relationships between various brands or products based on consumers' perceptions and preferences. So we can understand where our competitors have positioned themselves in the market.
- By visualizing these perceptions, marketers can develop more effective positioning strategies, target specific consumer segments, identify opportunities for differentiation, and make informed decisions to strengthen their brand's competitive position in the market.

Overall, evaluating the outcome of a competitive analysis involves synthesizing the insights gained from the research process, assessing their strategic significance, and identifying actionable insights to drive business success in a competitive market environment. By understanding the findings of the competitive analysis, businesses can make informed decisions, optimize their strategies, and position themselves for success in the marketplace.

Continue with competitive intelligence.

Collecting data on our competitors is a continuous process. As analysts, we have to continue gathering and researching our competitors. Because the marketing demands, trends change all the time, and we have to adapt to those changes.

After completing all the processes on competitor analysis, we can follow the following steps to continue the competitive intelligence analysis.

- I. Keep tabs on the competitors through customers or internal sources.
 - Have a process to track customers' thoughts and feelings.
 - Document customer's ideas, suggestions, and needs.
 - Use CRM software to track the customer's behaviors.
 - Review customer intelligence.
- II. Use external sources to collect competitors' data.
 - Social media communities like Reddit forms show us customers' experiences with our and our competitor's products. By analyzing these data, we can understand how to produce a product that fulfills customer's needs.
- III. Use the market analysis/competitor analysis software platforms.
 - Software platforms like Hoot Suite, Sprout Social, Quintly allow us to track/compare competitors' social media engagement with ours.

- We can also monitor customers' comments, shares, and reviews, on social media platforms to track what they say about the competitors.

IV. Review Industry news.

- As a market researcher or analyst, you must be aware of relevant industry news. You need to have a general knowledge of what's happening in your environment.
- We can use Ad-Week, marketing tech news, and media posts to learn about marketing news.
- Analyst reports like E-Marketers daily news provide us with knowledge on different market technologies and other industry news.

V. Summarize your opportunities and issues.

- As an analyst, it is a good habit to write and provide analytical reports on findings.
- Always create market details, findings, and competitor details in Data-visualize reports.
- Create detailed reports for future use.

VI. Share your competitor's findings with other departments.

- All the data we have gathered through research, we must share with other departments such as marketing, public relations, brand team, sales team, customer service team, etc.
- This needs to include SWOT, SOAR, or other analysis reports and provide recommendations.
- Create reports in a professional manner.

Conclusion

In conclusion, conducting a competitor analysis is essential for businesses to gain valuable insights into the market landscape and to know about our competitors. This also helps us in our strategic decision-making process and allows us to build counter-strategies against our competitors.

This article provides detailed information on how to perform competitor analysis, how to interpret market and competitor data, and how to identify competitors' strategies through analysis techniques such as SWOT analysis or SOAR analysis and benchmarking. And also, this article guides its readers on how to build a simple but effective competitor framework using benchmarking and perception mapping techniques.

Importantly, as an analyst you need to understand competitor analysis is not a one-time activity but a continuous process that requires ongoing monitoring and analysis of competitors and the competitive environment. This article also suggests what techniques we can use to continue with competitive intelligence and stay up to date on new market trends and demands.
